

Get better IT results with less effort.

Fiddlehead™ cuts installation times while reducing configuration headaches and administrative burdens.

The Fiddlehead hardware kit and preloaded software can turn a single desktop computer into as many as five student workstations that each perform and operate just as a dedicated standard desktop computer would.

Cut hours from the time it takes to build and clone workstations—whether you're installing identical configurations or mixing operating systems. Increase the number of seats on your network by up to five times—at minimal cost and **with no loss of performance**. Cut TCA and TCO by substantial margins. Give teachers more control over their classrooms and the

teaching process—while minimizing the administrative burden for IT.

Take charge with Fiddlehead—computer-sharing technology that goes beyond. *For more information, please visit our website. For questions or to arrange a presentation, please contact us at our North American headquarters.*

 **fiddlehead™**
Computer-sharing technology that goes beyond.

Fiddlehead™:

technology that makes the IT professional's job easier.

Now there's a technology that actually makes LESS work for IT professionals, not more. Offering a host of IT-friendly benefits, Fiddlehead has been developed and thoroughly tested in real-world schools to make sure every feature is practical, powerful, and easy to use.

Computer-sharing technology without the performance hit.

Unlike less-advanced alternatives, Fiddlehead can turn a single desktop computer into as many as five workstations—*without any loss of performance*. Each workstation performs and operates just as a dedicated standard desktop computer would, with the same operating system and software.

With Fiddlehead, your school can put more computers in front of more students—or maintain your current computer-to-student ratio now and in the future—more affordably than ever before.

Easy hardware installation.

To install Fiddlehead, just plug the multi-head video card into a PCI slot, plug the Fiddlehead cube(s) into a USB port, connect up to five monitors, keyboards, mice, and sound, and you're done.

Easy-to-configure, high-performance computer sharing software.

At Fiddlehead's core is our patent-pending containerized operating system for multiple operators simultaneously (COSMOS™), which offers substantial benefits over competitive software solutions:

- Fiddlehead is capable of running multiple standard operating systems (OS) such as Windows 2000®, Windows XP®, Windows Vista®, Mac OS X® or Linux® in separate containers at the same time, each dedicated for a single user.*

Upload classrooms and labs full of workstations in minutes with Fiddlehead—whether you're installing identical configurations or mixing operating systems via our patent-pending COSMOS™ technology.

- Each user's OS operates as if it were the only one on the system, with no delays, buffering, booting, or tiling of windows required—whether all users are running the same OS or different ones.
- IT professionals enjoy all the speed, power, and flexibility of our COSMOS control kernel, yet teachers and students interact only with their familiar Windows® OS and programs, reducing the time required for both administrative and support services.
- Fiddlehead can also serve as the ideal bridge to the freeware, open-source, and Linux worlds from a familiar Windows® environment.

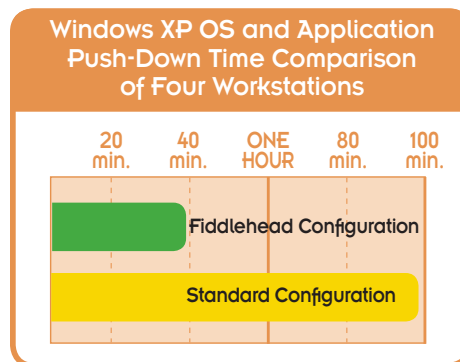

Reduced Total Cost of Acquisition (TCA) and Total Cost of Ownership (TCO).

Fiddlehead can cut TCA by up to 60% and energy costs by up to 70%, with significant additional savings on maintenance costs. For an estimate of how much your school can save, use the hardware costs and energy savings calculator at myfiddlehead.com.

Reusable and renewable.

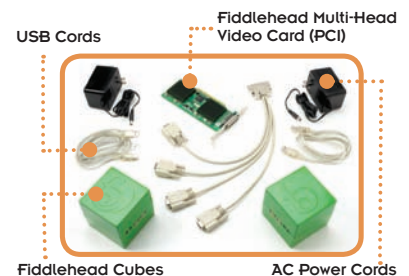

When your current desktop computers reach the end of their operational life, Fiddlehead can be removed and reinstalled in your new units, reducing the cost of upgrades and extending your return on investment even further into the future.

As a sustainable technology, Fiddlehead that can also help your department meet the demands of "green" initiatives by reducing the consumption of non-renewable energy and raw materials—thus lowering your school's carbon footprint and reducing its output of hazardous electronic waste.
