

Share Power. Create Connections. Extend Resources.

Fiddlehead™ benefits administrators, teachers, and IT professionals—while giving students more workstations for less money.

The Fiddlehead hardware kit and preloaded software can turn a single desktop computer into as many as five student workstations that each perform and operate just as a dedicated standard desktop computer would.

Increase your school's workstations up to five times at minimal cost using your existing desktop computers. Cut hardware and energy costs. Integrate technology more effectively into your curriculum. Facilitate and streamline differentiated learning. Help teachers teach more effectively while more easily integrating technology into their classrooms. And

cut hardware and software installation and IT maintenance costs substantially.

Take charge with Fiddlehead—computer-sharing technology that goes beyond. *For more information, please visit our website. For questions or to arrange a presentation, please contact us at our North American headquarters.*

 **fiddlehead™**
Computer-sharing technology that goes beyond.

A full-performance workstation for every student—at a fraction of the cost.

Studies show that greater access to technology that's been effectively integrated with curriculum increases learning. Unlike other, less-advanced computer-sharing technologies, Fiddlehead can turn a single desktop computer into as many as five student workstations—without any loss of performance. Each workstation performs and operates just as a dedicated standard desktop computer would.

Helping administrators do more with less.

When administrators face pressures from budgetary constraints, federal and state regulations, parental demands, and the needs of teachers and students, Fiddlehead can help:

- **Improved Computer Ratios**—at minimal cost.
- **Up to 60% Lower Hardware Costs**—for both initial installation and subsequent upgrades. Use our online hardware costs calculator at myfiddlehead.com.
- **Up to 70% Lower Energy Consumption**—compared to running full PCs.
- **Technology into Curriculum**—integrates with and facilitates curriculum development and implementation, including project-based learning (PBL). Visit myfiddlehead.com to download a PBL curriculum developed specifically for Fiddlehead integration.

- **Documented Advantages**—independently tested for quality and performance. See white papers and reports at myfiddlehead.com.

- **Sustainable Technology**—reduces consumption of non-renewable energy and raw materials, output of hazardous electronic waste, and your school's carbon footprint.

Making technology work for teachers.

Imagine a technology that gives teachers the tools to enhance interactive learning in classrooms, labs, and libraries:

- **Teacher Control™**—instantly view, control, blank, or pause students' workstations from your own "home screen" ... or even show one student's work to the entire class.
- **Search to Teach™**—find and install teacher-approved, age-appropriate educational software on our servers for virtually every subject.
- **Differentiated Learning**—via a project-based learning (PBL) curriculum system developed specifically for Fiddlehead, for more engaged, socially interactive learning. Visit my fiddlehead.com.

Easing the burden on IT professionals.

Now there's a technology that actually makes LESS work for IT professionals, not more:

- **Easy Hardware Installation**—just plug the multi-head video card into a PCI slot, plug the Fiddlehead cube(s) into a USB port, connect up to five monitors, keyboards, mice, and sound, and you're done.

- **Easy-to-Configure, High-Performance Computer Sharing Software**—based on our patent-pending containerized operating system for multiple operators simultaneously (COSMOS™). Each user's OS operates as if it were the only one on the system, with no delays, buffering, booting, or tiling needed. IT enjoys all the speed, power, and flexibility of our COSMOS control kernel, yet teachers and students interact only with their familiar Windows operating systems and programs, reducing administrative and support time.

- **Significantly Faster Pushdown**—upload classrooms, labs, and libraries full of workstations in minutes—whether you're installing identical configurations or mixing operating systems.
- **Reduced TCA and TCO**—cut TCA by up to 60% and computer energy consumption by up to 70%, with additional savings on maintenance. For customized estimates, visit myfiddlehead.com.
- **Reusable and Renewable**—when your current desktop computers reach the end of their operational life, Fiddlehead can be removed and reinstalled, reducing the cost of upgrades and extending your ROI.
