

# Take charge of interactive learning—and your classroom.

Fiddlehead™ gives you more control over your classroom, the teaching process, and your students' workstations than ever before.

The Fiddlehead hardware kit and preloaded software can turn a single desktop computer into as many as five student workstations that each perform and operate just as a dedicated standard desktop computer would.

View, control, blank, or pause every student's workstation from your own "home screen"—or even show one student's work to the whole class. Find teacher-approved free educational software for virtually any subject and grade level. Transform the promises of project-based learning (PBL) into realities. And keep

your students more engaged, attentive, and focused than ever before.

Take charge with Fiddlehead—computer-sharing technology that goes beyond. *For more information, please visit our website. For questions or to arrange a presentation, please contact us at our North American headquarters.*

 **fiddlehead™**  
Computer-sharing technology that goes beyond.

## Increasing learning through technology.

Studies show that greater access to technology increases learning. With Fiddlehead, your school can put more computers in front of more students—or maintain your current computer-to-student ratio now and in the future—more affordably than ever before.

Unlike other, less-advanced computer-sharing technologies, Fiddlehead can turn a single desktop computer into as many as five student workstations—without any loss of performance. Each workstation performs and operates desktop computer would, with the same operating system and software.

Imagine a technology that actually gives teachers MORE control over their classrooms, the teaching process, and the technology itself. That's what Fiddlehead's powerful, teacher-controlled features are all about. Fiddlehead has been developed and thoroughly tested in real-world schools to make sure every feature is practical, powerful, and easy to use.

### Teacher Control™: The name says it all.

Working from your own “teacher’s home screen,” this powerful classroom management feature enables you to:

- View all students’ computer screens simultaneously, or “zoom in” on an individual screen for a close-up look. You can see every keystroke and mouse movement as they happen.
- Take control of a single student’s workstation from your own workstation to show her or him how to do something.
- Temporarily pause or blank a student’s workstation—or all the workstations in the room—whenever you need a student’s attention or want to pause an activity.
- Show one student’s work to the whole class—on a central screen, an electronic white board or on every workstation, as you prefer.
- Use, control, and interact with electronic whiteboards more easily and effectively than ever before.

**Search to Teach™: immediate access to free educational software.** This powerful combination of a customized search engine and a large, growing collection of high-quality educational programs gives you the power to:

- Quickly find and install teacher-approved, age- and subject-appropriate educational software.
- Enhance the learning of virtually every subject—from math and sciences to the arts and humanities—and at every grade level, with minimal effort.
- All educational software is reviewed by the Syracuse University Center for Digital Literacy.

Please note that the *Search to Teach* search engine and access to our collection of software programs are available only to Fiddlehead users.

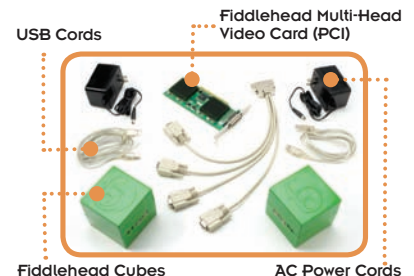

### Differentiated Learning: Easier and more effective than ever.

A project-based learning (PBL) curriculum system developed specifically for Fiddlehead—combined with its other teacher-empowering features—helps make the promise of more engaged, socially interactive learning a reality.

### Virtual CD-ROMs: One for all.

Fiddlehead allows students to work simultaneously from the same CD-ROM, which only needs to be loaded onto the host computer for use at multiple workstations. This not only saves time and money—it makes it easier for you to control access to your CD-ROMs.
